

Our expertise

We know escalators.

It is now around 100 years since the escalator made its entry into large stores in our cities. Escalators were and are a symbol of modern urban convenience, which is why we now find them everywhere. In Germany alone, more than 35,000 escalators perform their duty day in, day out. For many of these systems, the SCHOLPP team had a hand in the installation. Our experience stretches right back to the 1960s.

1960

SCHOLPP was successfully moving in escalators back in the early 1960s.

In high-footfall areas, flows of people have to move quickly and safely. Escalators have now conquered almost every sphere of public life in retail, culture, transportation and business. They convey customers in department stores and shopping malls, hardware stores and supermarkets, as well as passengers at train stations and airports, visitors to cinemas, museums and libraries, and businesspeople in exhibition centers and office and industrial buildings.

Keeping pace with the times.

Escalators and moving walkways are continually undergoing further development in these varied contexts of use. For SCHOLPP, this means never standing still: promoting our team's acquisition of new skills, replacing technical equipment and improving our logistical and installation processes. Equipped with this experience, SCHOLPP has developed a spectrum of services that covers the entire life cycle of an escalator.

SCHOLPP stands for reliability.

Every job is unique. The installation situations, dimensions and weights vary greatly, which is why we approach every project individually and are always well prepared. Our teams undergo regular technical training with the system manufacturers. This is how we guarantee our technical expertise and the safe handling of the technology.

The SCHOLPP promise:

Experience. Service. Expertise.

SCHOLPP

SCHOLPP
Worldwide Industrial Installation

Installation and dismantling of escalators and moving walkways

Creating mobility.
Moving people.

SCHOLPP Group

SCHOLPP is always close by.

The SCHOLPP Group is the leading provider of global relocation and installation services for industrial systems. Our 1,000+ employees complete around 20,000 installations each year - in 50 countries and counting. At SCHOLPP we have our own pool of lifting equipment, currently valued at over 25 million euros. Our specialists are on hand at 21 sites: 16 in Germany and 5 in major international economic centers, so SCHOLPP can get to where you need us to be, fast.

SCHOLPP services

We deliver what you need, in any size or shape.

As the leading 360° provider of installation and relocation services for machinery and production equipment, SCHOLPP can always find a solution that's a perfect fit, whatever the scale of your project. Because here at SCHOLPP, our maxim is effectiveness and cost-effectiveness.

You get the best of both worlds: the benefits that you expect from us combined with the most cost-effective use of personnel and technical resources. We bring in only the number of fitters and the equipment that the job demands.

You can pick and choose precisely the services you need from our service modules, covering the full spectrum of relocation and installation services and beyond. From dismantling, transportation and move-in right through to recommissioning: SCHOLPP can provide one-off specialist services or act as a general contractor with overall responsibility for a large-scale project.

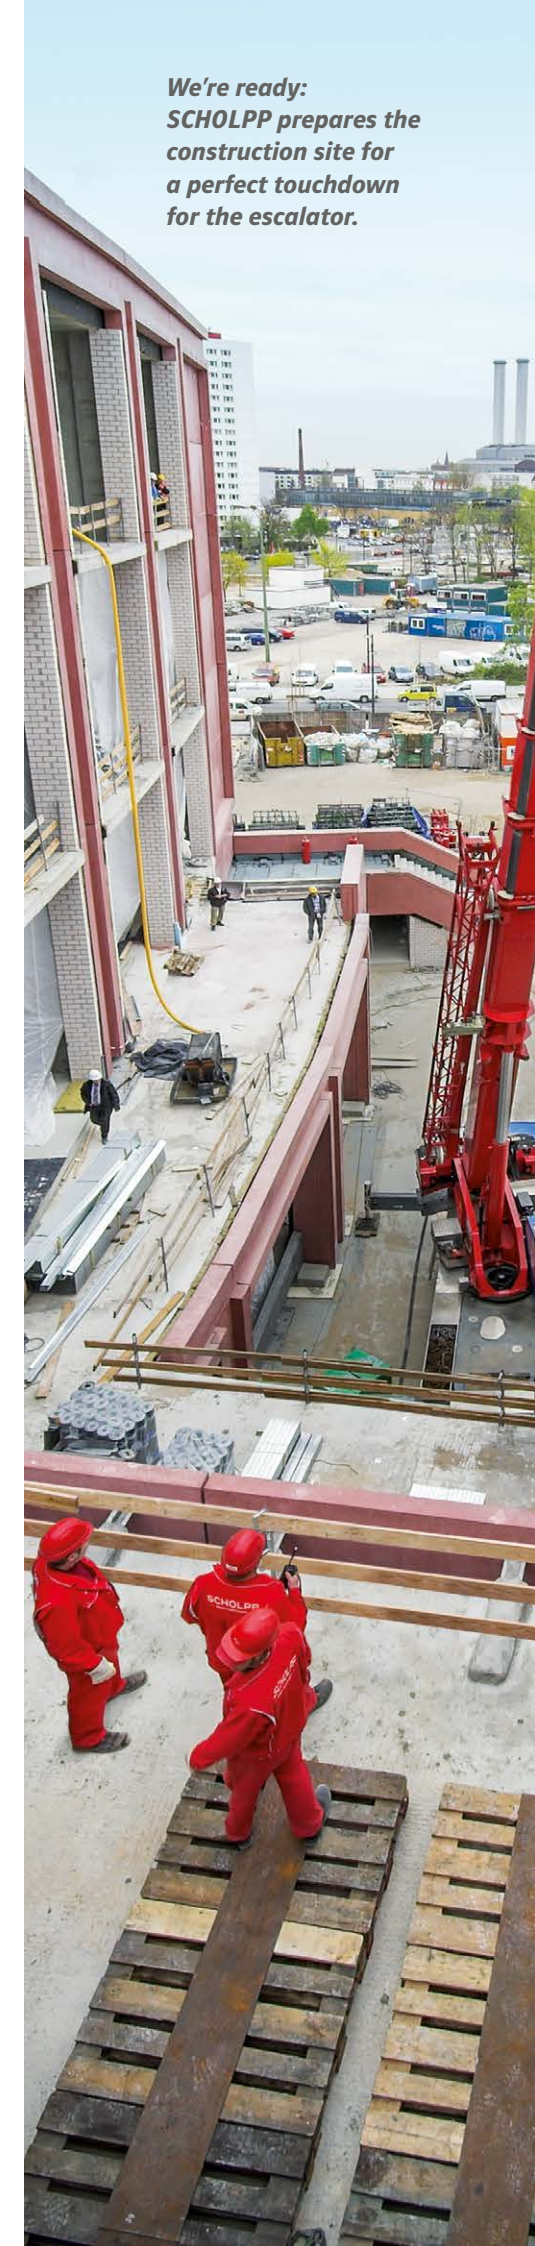

High-precision services, every time.

Installing, relocating and modernizing machines.

SCHOLPP modules

- Planning
- Dismantling
- Transport logistics
- Move-in
- Installation
- Electronics
- Commissioning
- Servicing
- Engineering
- Safety

We're ready:
SCHOLPP prepares the construction site for a perfect touchdown for the escalator.

By your side

SCHOLPP is your partner for the long run.

Special installation solutions, manufacturer-trained employees and cost-effective processes form the core of our expertise in escalator and moving-walkway projects. With us as your long-term partner, you benefit from our comprehensive understanding of the product, processes that run like clockwork and transparency on costs.

Solutions for all product groups.

We provide services for all product groups, for all brands and in all areas of application and installation situations:

- **Store systems**
(e.g., shopping malls, department stores)
- **Transportation systems**
(e.g., train stations, cinemas, exhibition centers)
- **Moving-walkway systems**
(e.g., airports, shopping malls)

We're familiar with all of the specifications for these product groups: spiral escalators, moving walkways, inclined moving walkways, belt-type moving walkways and moving walkways in public transportation.

The partner for system manufacturers.
As your specialist, we handle the new installation and dismantling of all types of escalators and moving walkways: from the installation concept and cost planning to logistics and move-in through to rigging and preparation for commissioning. Your systems get to your end customers and operators faster with SCHOLPP.

Cooperation with specialist planners, architects and building planners.
We cooperate with specialist planners on request and contribute to major projects with our specialist knowledge. When it comes to escalators, building planners can rely on our expertise. We review the structural analysis and develop a move-in solution.

We support architects and general contractors as expert advisers right from the building planning stage, with costing prior to the start of construction and with feasibility studies for move-in solutions. The required transportation surfaces, the dimensioning of the access routes and the quality of the ceiling anchors – with us, you get everything from a single source.

A full service for transportation companies.
For transportation companies and operators of subways, airports and train stations, we act as a service provider for refurbishments and replacements. We disassemble and dispose of old systems, transport and move in new ones, install them and prepare them for commissioning.

This is our motto:
Advise as a partner. Find the best solution. Work together.

Services

Picking up speed and heading in the right direction.

SCHOLPP stands for the highest standards of technical expertise, excellent people skills and efficient organizational abilities. We have brought these skills together to create a modular portfolio of services for our customers. Based on your needs and requirements, we develop a custom package from our service modules: from a one-off service to a complete installation service.

Before work starts:
A site inspection is essential.
Installing an escalator is never standard because every construction site is different. We determine which services are required based on a detailed site inspection. Move-in openings, curves and bends in the transportation routes, floor loads and ceiling structural analysis, potential anchor points for lifting gear – we start by collecting all the relevant data on the building.

Thinking ahead:
The construction site and transportation.
Good preparation is the key to an optimum installation and minimizes costs from the outset. With SCHOLPP, there are no nasty surprises – not with the access routes for the delivery nor with the move-in opening in the building or the internal on-site transportation to the place of installation.

With a steady hand:
Move-in and installation.
High footfall during business and opening hours is the norm. We therefore schedule our work in line with our customer's requirements and the conditions on site. If road closures or business closures are not possible during normal hours, we can work on weekends and at night as needed.

This requires additional flexibility from our employees: we work in step with our customers. With everything that we do, SCHOLPP observes the safety standards for the plant and equipment and takes the utmost care when maneuvering on access routes. We take all the necessary protective measures to prevent damage to the technology, the building and its interior.

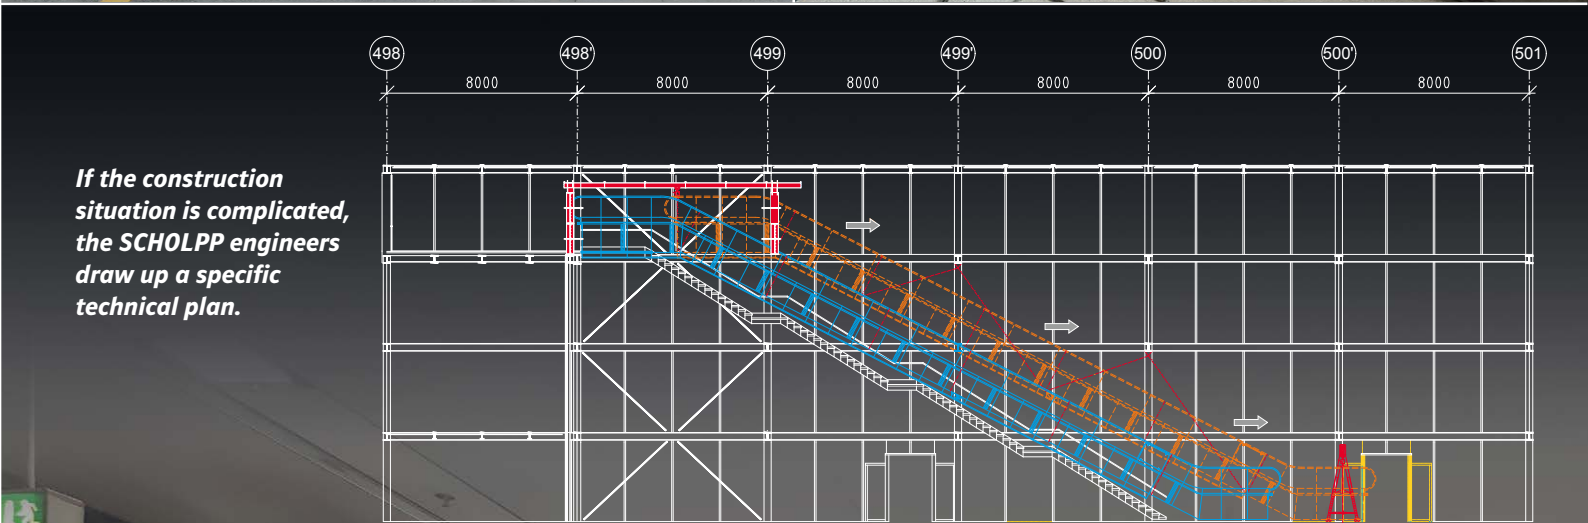

Aiming high?
We're with you at every stage.

Our core services:

- Advice and feasibility studies
- Concept development for transport logistics
- Dismantling and disposal of old escalators
- Move-in solutions and installation concepts
- New installation, rigging and installation
- Final installation through to TÜV acceptance
- Preparation for commissioning

For all possible arrangements:

- Single units
- Continuous arrangements serving multiple floors
- Interrupted arrangements (one-way traffic)
- Parallel, interrupted arrangements (two-way traffic)
- Crisscross, continuous arrangements (two-way traffic)

Technical solutions

Lifting with strength and skill.

Perhaps there is limited space in the building, but large escalators are to be installed? Or maybe the systems are extremely heavy, but the ceiling has a low load-bearing capacity? The architectural context for an escalator installation is never simple. There are no off-the-shelf solutions. But we always have an ace up our sleeves for our customers: our technology.

Equipped to lift any load, in any situation.

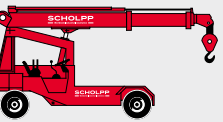

Equipped to lift any load, in any situation. Whatever the challenges are on the site, we tackle them with technical expertise. We deploy our diverse fleet of equipment depending on the situation. SCHOLPP has its own forklifts and Manghi in-plant cranes, aluminum gantries, electric chain hoists and anchoring gear, trucks specially equipped for escalator installation, and other special equipment. From small tools through to semitrailers, we bring everything needed.

Keeping a level head, keeping our word.

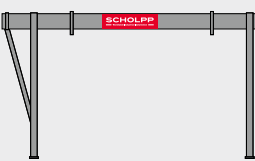

Safe move-in operations, positioning to millimeter accuracy, professional installations – this is precisely what our customers want. And it is precisely what we set out to deliver. Our technical solutions live up to our promise.

In or out? Above or below?
SCHOLPP technology moves anything, anywhere.

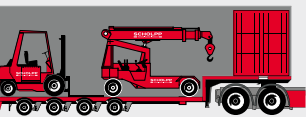

This technology is only available from SCHOLPP:

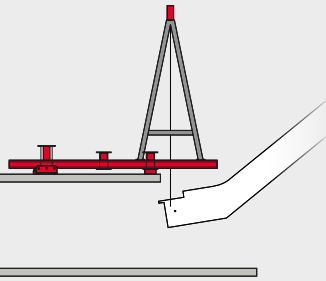

Manghi industrial cranes
Built for confined spaces. Their very compact design makes these cranes extremely agile. Even under high loads, their maneuverability is exceptional.

Aluminum gantries
A linchpin of installation work, aluminum gantries have an adjustable construction and extra-long support systems. They are lightweight and quick to install, yet they achieve a tremendous load-bearing capacity thanks to their geometry. They make an ideal combination when teamed with strong electric chain hoists.

Escalator jumbo
Our escalator jumbo is the complete package on wheels for escalator installations. It contains all our specialist equipment and tools that we need for an installation. With it, we always have everything to hand even if we need to improvise at short notice.

Special constructions
What doesn't fit gets adapted. Our planners and fitters design and build special constructions if standard installation solutions cannot be used. "Not possible" is something we never say at SCHOLPP.
